HIGH-LEVEL DESIGN · NFL EVENTS HUB

NFL Events Hub — high-level design

1. **Clients.** NFL OnePass and the NFL App open the hub in a WebView; the web is nfl.com and club sites. One portal for all three.

2. **Edge.** DNS → CDN. The CDN serves cached pages to everyone and sends only `/auth` and `/api` to the edge worker.
3. **Platform we build.** The NFL Events Hub on AEM Edge Delivery (authored by clubs and the league) and a thin edge worker: stateless, no database.
4. **NFL services.** NFL ID for sign-in; the OnePass event platform owns registrations, QR, wallet passes and notifications.
5. **Partners.** Paid events link out to Ticketmaster (VIP via On Location). No payments in the hub.
6. **Operations.** GitHub → code sync → preview → live; WAF and bot rules at the CDN; AEM telemetry and logs. No servers, VPCs or databases to run.
